

Aeries Mobile

Introduction

Aeries Mobile is designed to provide school and district administrators easy access to the information they need on their iPad, iPhone or iPod Touch.

System Highlights

- Synchronize data as often as you need
- Multiple schools on same device with no need to change schools
- Option to cache all data on your device for remote use
- Easy Implementation
- All models of iPad, iPhone, iPod Touch
- Same SQL Database, Login and Permissions as used by Aeries

System Features

- Student Demographics
- Attendance
- Contacts
- Discipline
- Medical Log and History
- Class Schedules
- Courses and Sections
- Student Birthday Lists

Expanding Data Management Opportunities

Aeries Mobile makes it possible for busy administrators to find information on students during their normal daily activities or during emergencies without the need to return to their office. The ability to cache all data on the device makes it possible to access student and class information when the district network is unavailable in emergencies or from remote locations.

Emergency Response and Preparedness – Class List Photos

The class list feature is especially useful in emergencies where an administrator needs to identify quickly whether all students in a class have been accounted for or for helping to identify injured students unable to assist first responders.

Tapping a student's entry on the Class List will give you access to all the other information available on the student – attendance, contacts, discipline, medical and the student's full schedule.
